ROOFTOP SOLAR POWER SYSTEM

Rooftop solar power is a revolution that is sweeping across the country and the world. India is particularly well suited to solar power due to its high solar radiation and generation potential. Backed by favourable policies and generous incentives, India is all set to be one of the largest generators of solar power in the world.

Colleges will play a vital role in this transformation, not only in creating awareness about solar energy amongst their students, but also by utilising rooftop solar power to demonstrate that they are already part of the future. The benefits to the institution, its faculty, students, and to society at large are enormous which is why many of India's most famous educational institutions have already deployed large rooftop solar power plants on their rooftops.
